

ANAPHYLAXIS AND AUTOINJECTORS

This course outlines how anaphylaxis can be caused by a broad range of 'triggers', such as insect stings, foods, for example nuts and shellfish, latex medicines, such as penicillin. Learners will also learn how to recognise the symptoms and identify how to administer first aid to a casualty who is suffering from anaphylaxis.

 Areas Covered	 Who is it aimed at?
Reactions to allergens Anaphylaxis An employee's responsibility Adrenaline autoinjectors Common traits	Any employee or manager working in an environment where an understanding of anaphylaxis and autoinjectors would be beneficial. This course can be used as a stand-alone module or included in an induction programme.
	▶ Learners will receive a Highfield e-learning completion certificate, which is downloadable upon successfully finishing the course.
	▶ Our e-learning is available to use on multiple platforms such as tablets, PC's and laptops. All you need is a good internet connection. Learners simply log on to the Ubique Learner Management System (LMS) and work their way through the course, along with the scenarios that provide them with real-life context.

Why Choose Ubique Safety Consultancy E-learning?

We make the most complex of subjects easier to digest through media and content-rich exercises that motivate and engage learners. All our e-learning uses interactive exercises and gaming combined with media-rich content, interactive scenarios, and relevant photography and illustrations. Content is provided by industry-leading experts. What that means for your learners is stimulating and engaging content they will respond to and, most importantly, remember.

Key Details

Prerequisites: No prior Knowledge Needed

Assessment: Multiple Choice Questions

LMS: Yes

Compatibility: Laptop/ Desktop/ Tablet
